

AIDEN SMITH

Full-Stack Developer | Website Support Lead | DNS & Domain Infrastructure
Columbus, Ohio | aidensmith.dev | github.com/ryvrook | linkedin.com/in/aidensmithdev

SUMMARY

Full-stack developer with 6+ years building web software and 4+ years keeping thousands of client domains online. Ships production systems in Go and TypeScript, including a multi-tenant DNS monitoring platform as well as web and mobile apps built with React, Expo, PostgreSQL, and Docker. Turns recurring support problems into tooling, documentation, and training for non-technical teams.

SKILLS

Languages	TypeScript, JavaScript, Go, PHP, SQL (PostgreSQL, PL/pgSQL, MySQL), HTML, CSS
Frameworks	React, Next.js, Node.js, Express, Expo / React Native, htmx, Laravel, Tailwind CSS
Infrastructure	Docker Compose, Linux (NixOS, Ubuntu), nginx, Cloudflare (Workers, D1, DNS), Redis, PostgreSQL 16, Stripe, Git/GitHub
DNS & Domains	DNS records & DNSSEC, WHOIS / RDAP, SSL/TLS & ACME, propagation troubleshooting, domain transfers, GoDaddy, Namecheap, Squarespace, cPanel
Practices	REST API design, JWT/RBAC multi-tenant security, Salesforce & Google Workspace integration, technical SOPs

EXPERIENCE

Best Version Media | *Website Support Lead* | Remote 04/2026 – Present

- Lead website support for a network of small-business client sites, owning DNS configuration and launch readiness so new sites go live correctly and stay online.
- Diagnose and resolve DNS, SSL, and hosting issues that take client sites offline, and serve as the team escalation point for domain questions.

RevLocal | *Website Solutions Specialist* | Granville, Ohio 07/2022 – 03/2026

- Registered, configured, and monitored 5,000+ client domains, including DNS management, boilerplate setup, and renewal tracking.
- Completed 500+ domain ownership transfers and resolved complex DNS, SSL, and outage issues, contributing to a 20% reduction in client support tickets.
- Designed Salesforce automation that improved process efficiency 15% across two teams, cutting administrative overhead and speeding up reporting.
- Deployed, designed, and maintained custom AI tools tailored to organizational needs, gathered end-user feedback across three key tools, and trained and supported staff on adoption.
- Developed API integrations and configured Google Workspace and CRM connections for clients, boosting satisfaction ratings and supporting client retention.
- Authored a DNS and domain training SOP for non-technical teammates covering five common client scenarios, registrar-specific workflows (GoDaddy, Namecheap, Squarespace, cPanel), and escalation.

Oceanic Gaming LLC | *Lead Web Developer* | Tampa, FL (Contract) 01/2021 – 09/2021

DOCTYPE | *Development Coordinator* | Columbus, Ohio 11/2018 – 12/2020

- Designed and delivered community courses in Python, web development, and computer literacy, and partnered with instructors on curriculum and classroom environment.

SELECTED PROJECTS

Enterprise VectorDNS | *vectordns.dev* Go, PostgreSQL, Redis, htmx, Docker

- Enterprise DNS, certificate, and WHOIS monitoring platform delivered as a single Go binary serving a REST API (~189 routes), WebSocket change feeds, admin panel, and org dashboard, with 400+ commits.
- Multi-tenant security across the platform, including organization-level data isolation, user permissions, rate limiting, secure secret storage, two-factor authentication, audit logging, and safeguards for outbound webhooks.
- DNS, certificate, and WHOIS scanners run across ~24 public resolvers in six regions with plan-based cadences, flap auto-throttling, and canonicalization so history records real changes instead of noise, backed by a Redis Streams job queue.
- Client-facing layer built for people, not just engineers, with an org dashboard showing visual DNS change diffs, human-readable operational digests and exports, TXT-verified status pages hosted on customer domains, and alerts delivered by email or webhook.

Roadrunner | *roadrunnerlog.com* React, Express, PostgreSQL, Expo, Docker

- Vehicle maintenance platform on web and mobile covering service records, parts, costs, odometer history, file uploads, and overdue reminders with calendar export.

Flock Directories | *aidensmith.dev/projects* TypeScript, Next.js, Static Site Generation

- Template for running many independent local business directories where a single JSON file of validated business data produces a complete static site on its own domain, making each new site near-zero effort. Six-site Columbus pilot including a 142-listing reviewed directory.

EDUCATION & CERTIFICATIONS

Columbus State Community College, A.A.S. in Full-Stack Web Development (08/2021) | **Udacity** React Nanodegree
